

Really small and **very simple** to use

Mini LED projector for use with PCs and notebooks

It has never been more convenient to bring along a projector for your Windows PC. The LT71 is palm sized and fits easily into your pocket or laptop case.

Install the SW, plug in the cable and you are up and running in a matter of minutes.

Couldn't be simpler!

No batteries, no chargers, no buttons. Just plug it in and your PalmViewer projects your PC or laptop screen onto just about anything; a wall, a door, the back of a seat, someone's back, or just a piece of paper. Everything you need to get going is included in the kit.

Apart from the PalmViewer LT71 itself, a USB cable, a flexible tripod stand and a mini CD with PC SW are included in the box.
